

HEX-DESK

HEX DESK

The Alumni Hex desk was developed as a tool for students and teachers to implement common core learning concepts. It can be arranged in collaborative groups or traditional rows. In its ideal group configuration of 6, students are able to sit in a circular arrangement for group activities and learning. Optional casters make this desk mobile and easy to move into a multitude of configurations. These desks can be pulled apart for either individual study or testing purposes. Full-frame construction takes the wiggle out of learning.
